DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a memory device having switch for controlling the parasitic capacitance on the data bus, classified in class 365, subclass 63.
- II. Claims 10-29, drawn to a state decoder, classified in class 365, subclass 230.06.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions invention I and II have different functions. Specifically, the state decoder in group II could be used for decoding addresses in a memory device and the switch in group II could be used as a device for reducing parasitic capacitance in the data buses..

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
